

## Tyler Peck

Tyler Peck is a Sustainability and Planning Consultant at Metropolis Green, a renewable energy and sustainability consultancy. Metropolis Green provides expert and strategic planning advice on sustainable buildings and renewable energy technologies. Tyler advises a wide range of clients on issues of sustainable design and construction for diverse development projects in and around London. He has also successfully managed a number of the consultancy's Code for Sustainable Homes projects to certification. Tyler specialises in the preparation of sustainability strategies for projects at the planning stage and has in-depth knowledge of a range of issues, including energy, low and zero carbon technologies, sustainable drainage and water efficiency.

Tyler studied planning and sustainable cities in both Canada and the UK and is a licensed BREEAM Assessor. Tyler's postgraduate research focused on the implementation of resilient infrastructure through planning policy in London and he also completed a research project on UK energy policy for CABI as part of his postgraduate studies. Before his time in London, he previously worked as a planner at a planning and urban design consultancy in Toronto, successfully delivering planning permission for a number of high profile developments. Tyler also worked in development planning for a regional planning authority and in communications at the Ontario Ministry of the Environment.
